Reduce depth of drawer base cabinet (min. depth 12")

BEFORE
AFTER

The standard measurement for a Fabuwood base cabinet is $24^{\prime \prime}$ deep. Fabuwood will customize the cabinet depth per customer requirements. Generally, customizations are done in $3^{\prime \prime}$ increments, but can also be done to a custom size, such as $16^{\prime \prime}$,
$17^{\prime \prime}$, or even $171^{\prime \prime}$ " deep. Base cabinet must have a minimum depth of $12^{\prime \prime}$.

The drawer box will be cut to $3^{\prime \prime}$ less than the cabinet depth. For example, if base cabinet is cut to $18^{\prime \prime}$ deep, the drawer box and slides will measure $15^{\prime \prime}$ deep. To accommodate the drawer slides, the drawer box can only be cut in $3^{\prime \prime}$ increments.

As with a base cabinet, Fabuwood offers the option to cut the depth of a drawer base
cabinet to customer specifications.
The depth of all three drawer boxes will be cut
$3^{\prime \prime}$ less than the cabinet box. For example: When a cabinet is cut to $18^{\prime \prime}$ deep the drawer boxes and slides will be $15^{\prime \prime}$ deep. The minimum depth of a drawer base cabinet must be $12^{\prime \prime}$.
